Address: Barsha Heights, Dubai, UAE

EXPERIENCE

Professional Summary

UX/UI Designer with a working knowledge of frontend development — a combination that lets me design with technical constraints in mind and bridge the gap between design and engineering teams. I have shipped live digital products across Figma and WordPress, led a full-stack academic project as both team manager and frontend developer, and approach every screen as a system problem, not just a visual one. Currently completing a BSc in Computer Science at De Montfort University. Open to part-time UX or design-development hybrid roles in Dubai where design quality and build feasibility are treated as the same problem.

UI/UX Designer | Self-Initiated Projects

// May 2025 - Present, Remote

- Audited a Vastu consultancy website (family business) with inconsistent typography, cluttered layouts, and zero visual hierarchy. Redesigned and deployed a clean, content-led WordPress site — established a cohesive brand identity, structured the content hierarchy, and configured all plugins and layout logic from scratch. Site is live and actively serving clients.
- Designed and deployed a personal portfolio (danishsaini.com) using WordPress — structured information architecture to present both design and frontend work in a single coherent narrative, configured SEO plugins, and built a responsive layout system across all device breakpoints.

Frontend Development & Project Lead | Academic Project, KPU

// Jan 2024 – Apr 2024, Surrey, Canada

- Co-conceptualised and led frontend development for a browser-based document management system for a simulated law firm (Pearson Specter) — enabling role-based access control (add, edit, delete, view) with encrypted user authentication and session management.
- Architected and built the login flow, main dashboard, and reusable page layout system in HTML/CSS/JS — coordinating directly with the backend developer on data structure, API integration points, and access logic to ensure design and code were always aligned.
- Managed team of 5 across frontend, backend, documentation, and presentation workstreams — received top grade (A) and faculty commendation for technical execution and project organisation.

Barista | Blenz Coffee

// February 2023 - March 2025, Ladner, BC

- Delivered consistent service to 200+ customers daily, managing high-volume peak periods without drop in quality or speed — built strong habits around prioritisation, task-switching, and composure under pressure.
- Identified friction in staff onboarding workflows and redesigned the training process — resulting in a measurable 20% increase in operational efficiency and faster ramp-up for new hires.

PROJECTS

FindMyTutor | UX/UI Case Study ([Link to Behance](#))

// Figma · Google Stitch · End-to-end UX process · Clickable hi-fi prototype

- Identified the core problem: students struggle to find, vet, and book tutors across a fragmented market. Designed a full tutor scheduling app from scratch — user research, user personas, information architecture, lo-fi wireframes across 6 screens, and a complete hi-fi prototype with a defined design system across 5 screens including Home, Tutor Profile, Book a Session, Booking Confirmation, and My Bookings.

- Built a cohesive design system first — type scale, color tokens (indigo primary, semantic states), spacing units, and a reusable component library — before producing a single hi-fi screen. Resulting prototype is clickable, consistent, and published as a full case study on Behance.
- Approached every screen as a conversion and trust problem: tutor profile structured to build credibility before asking for commitment, booking flow designed to reduce decision fatigue with time slots grouped by time of day, and confirmation screen designed to drive next-action behavior rather than dead-end the user.

Little Lemon Restaurant | React Web App ([Link of Website](#))

// *React 18 · Context API · React Router · Responsive CSS · Meta Frontend Capstone*

- Built a fully functional multi-page restaurant web application as the capstone project for the Meta Frontend Development course — features include interactive menu browsing, online reservations with live availability, shopping cart with persistent state management via Context API, and order tracking across sessions.
- Implemented component-based architecture with reusable components across 8+ page views, seamless multi-page navigation via React Router, and fully responsive layouts optimised across mobile, tablet, and desktop breakpoints.
- Demonstrates the design-to-development pipeline in practice: UI designed with UX principles first, then built in React — the same hybrid workflow that is core to my professional positioning

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science (Hons.) | De Montfort University, Dubai

// *September 2025 - Present*

- Current GPA: 3.8

Diploma In Computer Information Systems | Kwantlen Polytechnic University, Canada

// *May 2022 – August 2024*

- Member, KPU IT Club · Two-time award winner, KPU International Peer Mentorship Program

Google UX Design Certificate | Online

// *May 2025 – Jun 2025*

- Wireframing, prototyping, user research, usability testing, information architecture

Meta Frontend Development Certificate | Online

// *June 2025 – September 2025*

- HTML, CSS, JavaScript, React 18, Version Control, Advanced React, Responsive Design

SKILLS

Design

Figma (components, auto-layout, interactive prototyping), Wireframing, User Flows, Information Architecture, Interaction Design, Visual Hierarchy, Mobile-First Design, Accessibility (WCAG fundamentals), Usability Testing, Design Systems

Development

HTML, CSS, JavaScript, WordPress (CMS configuration, plugin setup, layout architecture), Git Basics

Process

User research, Persona Development, Iterative Design, Developer Handoff, Agile, Cross-Functional Collaboration
